

For Immediate Release

Contour Announces RollerMouse Swedish Success Story Video and Free Trial Offer

Contour Design RollerMouse(tm) is installed in 4 out of 5 of Sweden's workstations where health and safety professionals have deemed use of a Central Pointing Device (CPD), the best solution. Visit The National Safety Council in Chicago (booth #2855) for a FREE CD, which includes bonus footage from real users telling their RollerMouse story.

Windham, NH 27 Aug 03 - Contour Design is proud to announce, the release of the Swedish Success Story Video. Click here to play video: http://63.111.59.172/cdi_ergo/rm_video/content/default.asp

In Sweden, preventing worker health problems, such as repetitive stress injuries (RSI), e.g., Carpal Tunnel Syndrome, is a far more cost-effective strategy than paying for disabilities encountered or exacerbated in the workplace. Swedish organizations have learned that CPDs are preventive and simple devices for RSI and actually improve worker productivity. The Contour Design RollerMouse has become the "mouse of choice" on 80% of the desktops where CPDs have been installed.

Contour Design is offering a 30-day free trial of the item. James Golden, Vice President CAE, explains, "Our design focus has always been on safety and health what we call 'Dynamic Ergonomics' you really have to try a RollerMouse to realize both the health benefits as well as the productivity enhancements the growing body of injured computer users are reporting."

At the National Safety Council Congress and Expo, 8-10 Sep 03, Contour will have FREE copies of a new CD that describes the Swedish Success Story. Visit Contour Design (booth #2855) at the Expo or if you're not going to be in Chicago that week, contact Contour directly by phone, 800-462-6678 or through the web site, www.contourdesign.com.

About Contour Design:

Contour Design, Inc. specializes in the development, research and design of top quality alternative computer input devices. Contour Design's devices can significantly reduce muscular discomfort while maximizing productivity. This is due to our meticulous attention to understanding the causes of pain associated with computer input devices. During the development stage, we rigorously refine our prototypes with extensive testing and continuous user feedback. We really go the extra mile improving and reworking not stopping until the product is perfected. Contour Design is concerned for the health and well being of our customers and it shows in the ergonomic integrity of our products.
